LOGAN DRILLING USA

A Subsidiary of Logan Drilling Group in Nova Scotia Canada, Logan Drilling USA was established in 2000 to provide and specialize in mud rotary drilling for the kaolin belt in Georgia, United States. With the head office located in Sandersville, Georgia. They quickly expanded into the industrial mineral market providing truck, rubber track, skid, or barge mounted diamond core drilling rigs throughout the United States. In addition, Logan Drilling USA provides barge or skid mounted geotechnical drilling services.

WHO WE ARE

Logan Drilling Group is committed to safety culture, quality of service, and supporting the communities in which we work. For this reason we create opportunities these communities through direct employment in the field, training in safety and environmental responsibility, and promote local industry by using local suppliers while playing a critical part in developing base industry.

MISSION

Our mission is to provide quality drilling services for both Geotechnical, Environmental and Mining exploration industries with a committed work force from senior management down; to provide a safe rewarding work place for our employees; and a personalized service to our clients while always leaving a positive experience in the communities we work.

VISION

To be a drilling company that is recognized for completing its projects in a safe, productive and efficient manner, while maintaining a top quality service and growing a base of clients with whom we meet each specific project requirement.
